

NEW!

The best-built homes have
HardieWrap™ written all over them.

As makers of the #1 brand of siding in America, no company knows more about creating beautiful, durable and weather-resistant home exteriors than James Hardie. We pioneered a superior technology with our fiber-cement siding products, the first layer of defense in weather protection. Now we've taken that same expertise to help create the HardieWrap™ weather barrier—your second line of defense.

Give your homes the protection they deserve with the new HardieWrap weather barrier.

Greater protection requires greater balance.

The HardieWrap™ weather barrier is an innovative, higher performing weather barrier made by James Hardie, America's #1 brand of siding. Unlike competitive weather barriers, HardieWrap weather barrier provides a balance of water holdout and water vapor permeability. The result is better protection from water damage, mildew and energy loss.

HardieWrap weather barrier—The Science Behind the Siding™

- Provides a balance of water holdout and breathability
- Superior air resistance to reduce energy loss in the home
- Thicker 11 mil sheet for exceptional tear resistance

A complete solution for your homes

The HardieWrap weather barrier solution is designed for fast and easy installation! When properly installed under James Hardie® siding, it gives your homes an unmatched double line of defense against water damage, mildew and energy loss.
